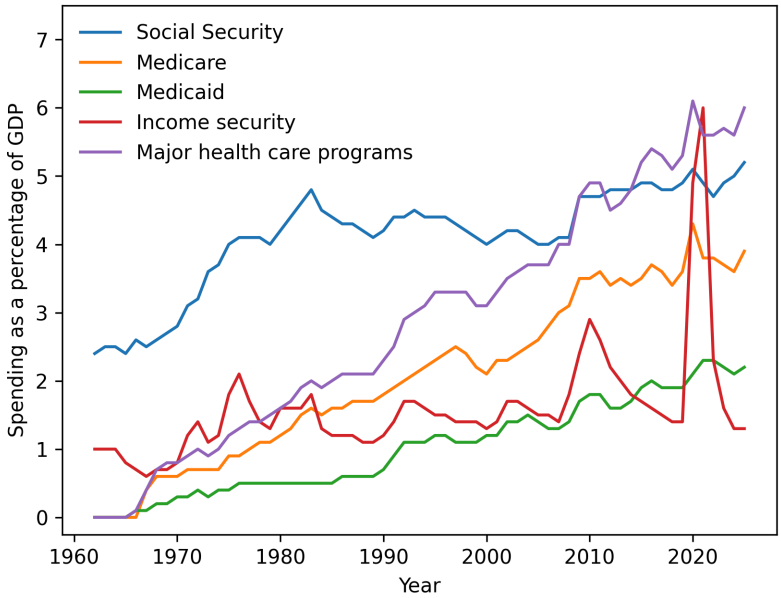
We make use of a variety of datasets, all pertaining to federal government spending, health outcomes, or economic factors. Our data is sourced from four primary datasets, which we later combine into a single dataset. Each of the four main datasets and its structure is detailed below

FederalSpending_MandatoryOutlays_1962-2025.csv

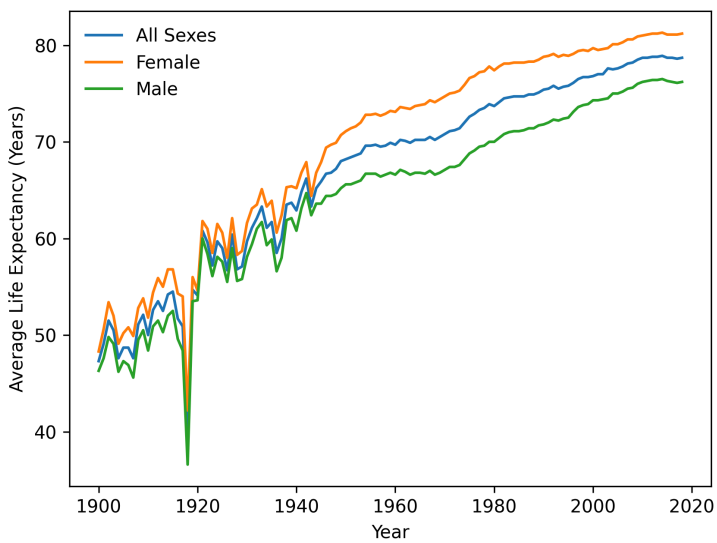
- This dataset details information on federal spending on a variety of healthcare and economic programs, as a function of year. Each column details a different type or purpose of government spending.
- **Columns**
    - *Year* - The year of the data observation
    - *Social Security (GDP)* - Federal spending on Social Security, as a fraction of total US gross domestic product (GDP)
    - *Medicare (GDP)* - Federal spending on Medicare, as a fraction of total GDP
    - *Medicaid (GDP)* - Federal spending on Medicaid, as a fraction of total GDP
    - *Income Security (GDP)* - Federal spending on Income Security, as a fraction of GDP
    - *Major Health Care Programs (GDP)* - Federal spending on Health Care Programs, as a fraction of total GDP
- **Plots**



DeathRatesAndLifeExpectancy.csv

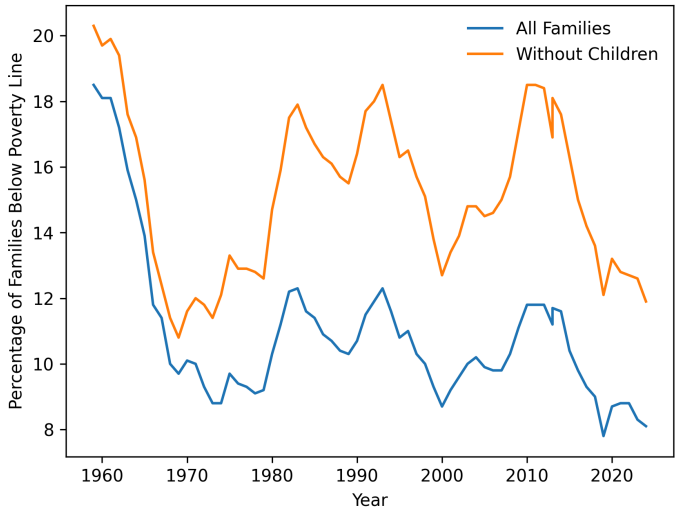
- This dataset includes yearly information from 1900 to 2018 on the average life expectancy, as well as death rate per 100,000 in the United States. It also includes information on race and sex.

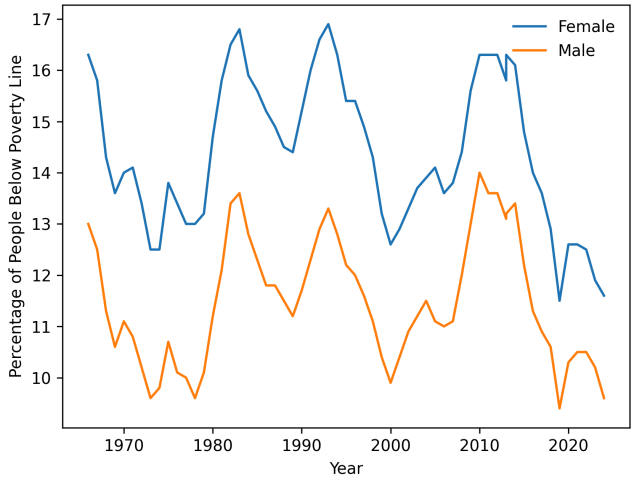
- **Columns**
    - *Year* - The year of the data observation
    - *Race* - Includes the categories ‘All Races’, ‘White’, and ‘Black’. This data is non-comprehensive, and doesn’t include all races individually, but is useful to get an idea of how life expectancy and death rate change as a function of race
    - *Sex* - Includes the categories ‘All Sexes’, ‘Male’, and ‘Female’. Splits death rates and life expectancy by these categories
    - *Average Life Expectancy* - The average life expectancy, measured in years at the time of observation
    - *Adjusted Death Rate* - The adjusted death rate (normalized per 100,000) at the time of observation
- **Plots**



Datasets - hstpov4concise.csv

- Includes yearly data on poverty rates among two categories, families with children, and all families, regardless of if they have children. This gives insights on how poverty connects to whether a family has children or not.
- **Columns**
    - *Year* - The year of the data observation
    - *Families below poverty (with and without children)* - The percentage of all families that fall below the poverty line in a given year
    - *Families below poverty (with children)* - The percentage of families with children that fall below the poverty line in a given year
- **Plots**



Datasets - hstpov7concise.csv


- Includes yearly data on poverty rates as a function of sex. This provides insight into the relationship between sex and poverty rates.
- **Columns**
    - *Year* - The year of the data observation
    - *Female Poverty Percent* - The percentage of female Americans who are below the poverty line in a given year
    - *Male Poverty Percent* - The percentage of male Americans who are below the poverty line in a given year
- **Plots**
